Subject:-Controlled Materials.

Ref.:-- Attached Application Submitted by
Hatem abu Hantash of Qaqun Village.

Applicant has an orange grove at Qaqun village as well as has a large area of about sixty Dunums closed to the grove and usually occupied by vegetables under irrigation.

Applicant grove was inspected by me and the belt in question was to be found very old and unserviceable.

The release of a new leather belt will be useful and much appreciated.

For your recommendation please.

Subject:- Controlled Materials.

Ref.:- Attached application and enclosures,

I enclose herewith an application together with two maps and COM/54 Forms submitted by Assa'd Hassan Jayyus Jaljulieh village, in respect of Controlled Materials.

The applicant project and land were inspected by me and the followings were observed.

The land in question is situated on the West side of the main road Tulkarm Jaffa via Jaljulieh village, of 3II Dunums as per attached maps. Very fertile loamy heavy soil, suitable for different crops vegetables, trees and cereals and occupied at present under summer crops as well as expected to be under vegetables in the coming Autumn.

The applicant bored a well. Water supply was tested in my presence for about three hours. For inches full of water with good pressure 50.-60 CM. of water were obtained, while water level dropped to 1, 30 C.M. only.

engine an As the area of 3IID. is very large and the motor engine and water supply require continuous work to irrigate such large area, it will be necessary to construct the water tank stated on the attached map.

I therefor be very thankful if you will kindly recommend the release of the required controlled materials after being checked and approved by the authorities concerned.

For your recommendation please.

Jerusalem.

Subject :- Controlled Materials.

Ref. :- Attached enclosures.

I enclose herewith an application submitted by Hussein Ali Khalil of Tulkarm together with COM/54 and two copies of a map of his project at Tulkarm, for which he applies for the release of cement, iron bars and timber.

Applicant owns a good piece of land of 40 Dunams, very fertile and loamy soil suitable for vegetables trees and other crops as well as closed to Tulkarm town.

The well digged in the applicant land was tested in my presence for about three hours, where the water supply was about 50 to 60 CM. per hour.

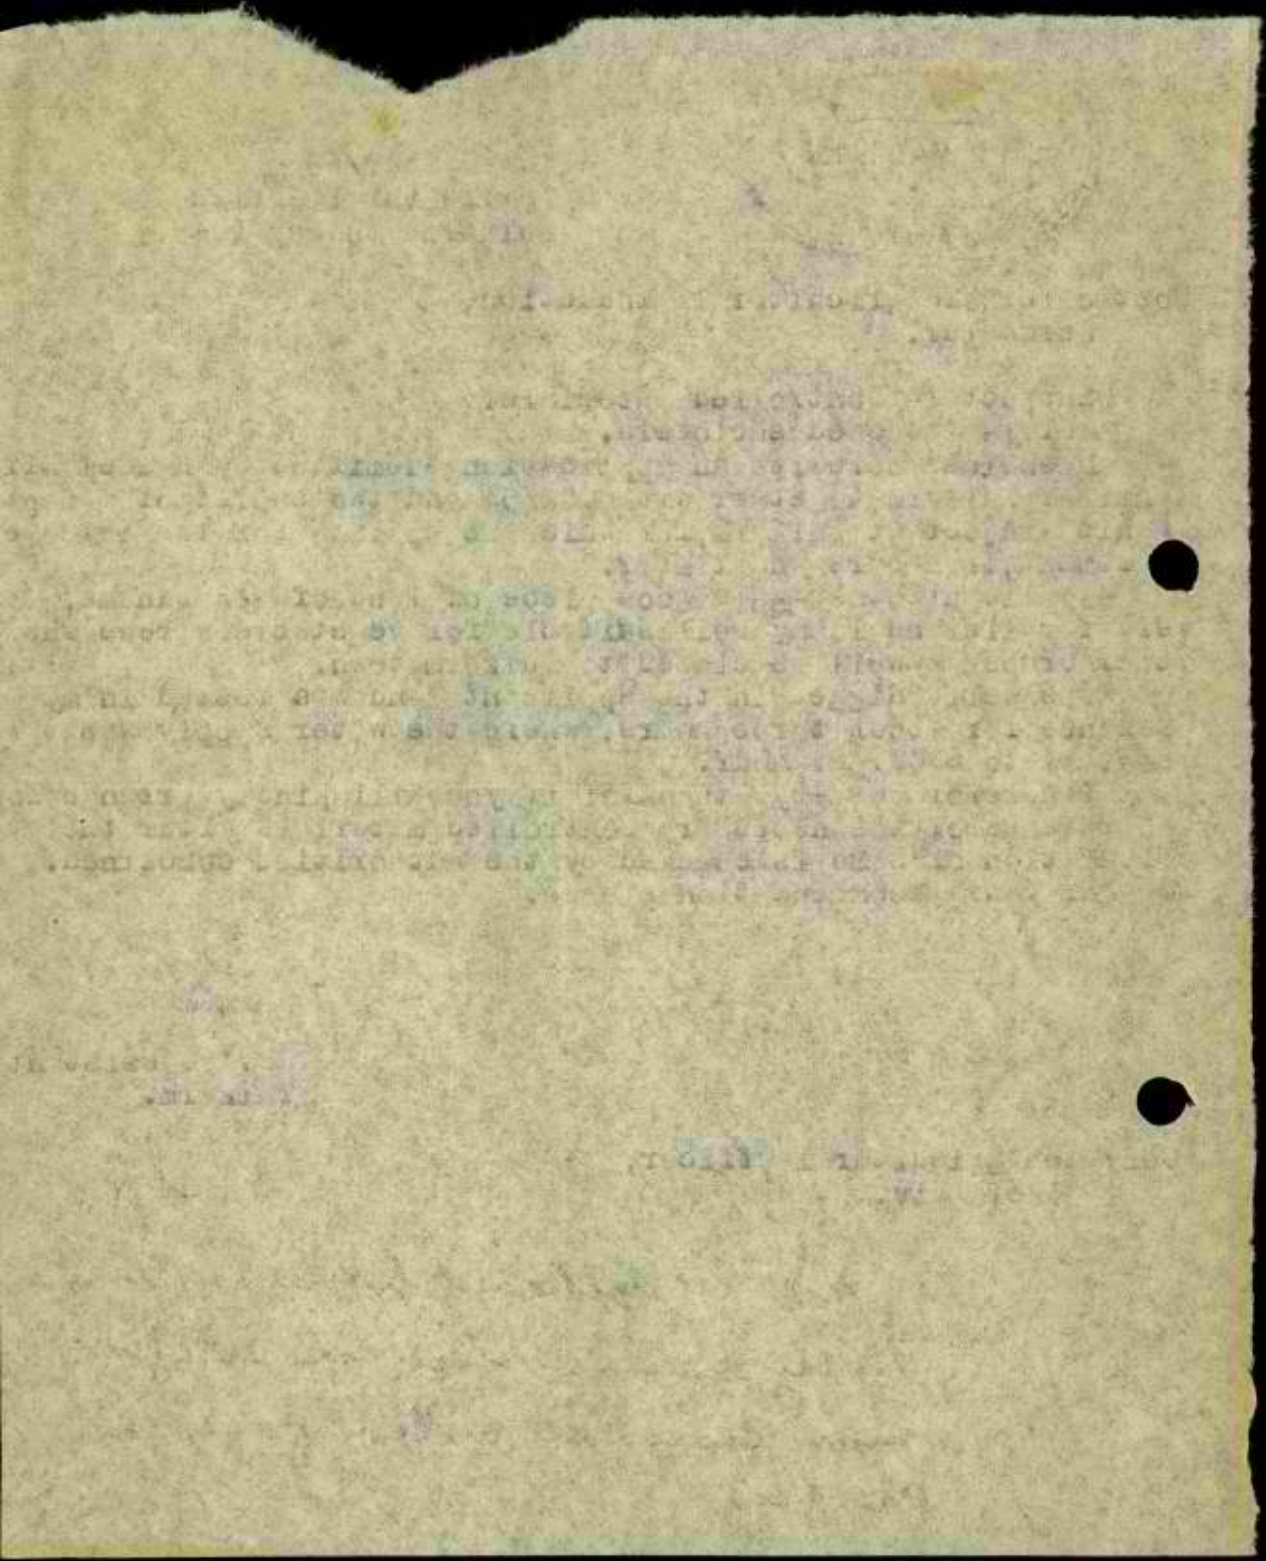

I therefore be very thankful if you will kindly arrange for the release of the necessary controlled materials after the calculation of same is checked by the authorities concerned.

For your recommendation please.

Subject :- Controlled Materials- Rubber Belt.
Ref. :- Attached Application.

Applicant land at Qaqun village which is specialize
for vegetables, was inspected by me on the 2nd May and found
that the belt in question is unserviceable and cannot be
used for irrigation of such a large scheme.

The release of the required belt 16 meters long
and 140cm. width will be much useful for the near coming
season and much appreciated.

For your recommendation please.

Jerusalem.

VJLVP
(561) 23 APR 1945

Subject: Controlled Materials.
Ref.: Your CAP/E/563 of 9-3-945.

Applicant project was visited by me for several times and once was together with the Irrigation Engineer Jerusalem, who advised the applicant to make a test by an expert and to have his final decision on the availability and of water supply in the present well.

Applicant tried a test through some people of Jaffa who informed him that the capacity of water could not be increased to over than 15-20CM. per hour, which cannot irrigate such a large area of 330 Dunams.

Applicant decided to bore a new well in the eastern side of his land where water (Nazzaz) is appearing at 1-2 Meters deep.

Applicant was advised to obtain an expert report on the case to facilitate the investigation and the release of Controlled Materials required, but he replied that such a report will be submitted when Required by the Controller of Agricultural Production.

For your kind information and necessary action please.

Controller of Agriculture & Production,
Jerusalem.

Subject: Controlled Materials / Leather belt.

Ref.: Attached application and Com/54.

Submitted by Nadin Salah.

On the 17th. inst. at the applicant's grove and
land were inspected by me at J. J. village and
found that the leather belt available in the grove is
unserviceable.

As the applicant is starting preparation of his
land for vegetables, it will be much appre-
ciated if you will kindly recommend the release of the
20 meters of leather belt applied for in the above
application.

Yours faithfully,
J. J. Tulkarm.

Subject : Controlled Materials Rubber Boots.
Ref.: Your AY 25 of 26th March 1945.

It is well known that I have to perform a part of my duties in a loamy muddy areas as well as in several occasions in irrigated heavy soil localities which require the use of rubber boots.

The following remarks are hereunder stated as instructed in Para 7 of your above quoted letter.

Name of applicant: - Mr. Shakir Hammad.

Postal address : - Agricultural Department Tulkarm.

The purpose for which the boots are required; -

To perform duties, inspection of lands, vegetables, orchards and controlled materials in their heavy soil lands and irrigated areas.

size No : - xx ; 41

2.4.45.

Controller of Agricultural Production.
Jerusalem.

Subject: Controlled Materials.

Reference: -Your CAP/I/II of 23.3.45.

On the 1.4.45 I visited the land of Iqab Abu Hantash at Jaffa village the following were observed:-

Concerning the five tons of cement issued to applicant, were used for roofing, flooring the pump house and foundation for the motor and the pump. Except 11 bags of the five tons are still remained which will be used for plastering the pump house.

As applicant's land is of a big area, of sandy-loamy soil, not surface, and the capacity of water is small (which is 50m³ per hour) if compared with the area of the land which will be irrigated (area of the land is 400 dunums) applicant is obliged to afford every drop of his available water by every possible way in order to increase the area which will be irrigated from whole total area of his land as water is the only limiting factor of the area which will be planted with irrigated vegetables.

For this the release of cement for channels and reservoir which quantity was recommended by the Water Commissioner is essential and its release is much appreciated, especially we are at the doors of spring irrigated vegetables season.

Concerning timber the supplier indicated by applicant is Mustapha Abu Zaid Jaffa.

Concerning rubber belt the supplier indicated by applicant is Yusef Jaffa - Tel-Aviv street, Tel-Aviv.

For your kind recommendation please.

Copy to - A.O. Tel-Aviv.

Junior Agricultural Assistant
Tulkarm.

1. The first part of the document is a letter from the President of the United States to the Congress, dated January 3, 1862. It is a very long letter, and it contains a great deal of information about the state of the country at that time. It is a very important document, and it is one of the most interesting documents in the collection.

THE UNIVERSITY OF CHICAGO

... ..

1. The first of these is the fact that the system is not a simple one, but a complex one, involving many different factors and many different people. The second is that the system is not a static one, but a dynamic one, which is constantly changing and evolving. The third is that the system is not a closed one, but an open one, which is constantly interacting with the outside world. The fourth is that the system is not a linear one, but a non-linear one, which is characterized by feedback loops and other non-linear relationships. The fifth is that the system is not a deterministic one, but a probabilistic one, which is characterized by uncertainty and risk. The sixth is that the system is not a single one, but a multiple one, which is characterized by many different perspectives and many different interests. The seventh is that the system is not a simple one, but a complex one, which is characterized by many different factors and many different people. The eighth is that the system is not a static one, but a dynamic one, which is constantly changing and evolving. The ninth is that the system is not a closed one, but an open one, which is constantly interacting with the outside world. The tenth is that the system is not a linear one, but a non-linear one, which is characterized by feedback loops and other non-linear relationships. The eleventh is that the system is not a deterministic one, but a probabilistic one, which is characterized by uncertainty and risk. The twelfth is that the system is not a single one, but a multiple one, which is characterized by many different perspectives and many different interests.

On the 23rd inst. the grove of Moammed Wadi Nabulsi at Qalansaws village Tulkarm S/D. was visited by me and the following were observed.

The grove is about 145 Dunums, most of which is under citrus trees and about 50 Dunums are under vegetables, ground nuts and cereals' cultivations.

The land in Question is irrigated by a filter and a plunger pump 6" at the depth of 71 meters, which supplies about 50 C.M. per hour. As the quantity of water supply is not sufficient to irrigate the grove and other cultivation as well as the water dropped 7 to 8 meters in addition to the 71 meters, it became necessary to add 8 meters of iron bars of 1 3/8" to collect the necessary water required.

The investigation on the above subject was done by a specialist in my presence.

The release of 24 meters of metal bars of 1 3/8" to repair the pump will give the necessary assistance in supplying the water required.

For your recommendation please.

2/10/50.

Director of Agricultural Production,
London.

Dear Sir:
Reference is made to your letter of 1/10/50.

On the 12th inst. the Grove of the 1st Division was visited by me and the following were observed:
The Grove is about 150 yards long and 50 yards wide. It is situated on a hillside and is surrounded by other groves. The trees are mostly mature and are of various species. The ground is covered with grass and some low-lying plants. The water supply is not sufficient to irrigate the trees and other crops. In addition to the 1st Division, it is necessary to collect a quantity of water for the 2nd Division. The investigation on the 12th inst. was done by Special Agent in Charge of the 1st Division. The results of the investigation will give the necessary assistance in supplying the water for the 2nd Division. For your recommendation please.

Yours faithfully,
Director, Agricultural Office,
Ministry of Agriculture.

Subject: Combine Machine
Re: Attached Application

I enclose herewith an application
submitted by Iqab Abdullatif Abu
Nantash and brothers of Bagan Village
Tulkarm S/D, in which they apply
for the release of a combine machine.

The applicants are land lords and
possess about three thousand Dounums
in their village, which has about eighteen
thousand Dounums, most of them are
plains. However there are about 4,000
Dounums in the village under tourist
crops - wheat and barley as well as, closed
to other villages which can utilize the
D.T.D.

Combining machine when necessary.

The release of the above mentioned machine to the applicants will be much useful and appreciated.

For your recommendation please

Hammad application.

The land of the applicant was inspected
by me and found to be in touch
to the houses in the village from the
West side as well as surrounded by
two main roads, which cause the
damages by the poultry and animals
to the crops.

The release of 120 Meters of Netting
wire together with 2000 Meters of barbed
wire will be much useful and appropriate.
For your recommendation please.

On the 8th instant, the applicant land near the Hadara Railway Station was visited by me for the investigation of the motor engine available in the scheme. The following was found.

The land in question was under certain winter vegetables and sugar cane during the last season but at the time being, under preparation for the coming season. The land is of a loamy top, fertile and suitable for vegetables and cereals.

The land is supplied by an old motor engine Mark Hunter Housley
P.T.O.

Model 1929 - Class 4M: of 14 H.P.

The motor in question is ~~out of order~~ and cannot be used for irrigation owing to its old age and destruction of certain parts and pieces in it.

Most of winter vegetables being planted during Autumn were not successful owing to shortage of irrigation.

The release of a permit to purchase a new motor for the scheme will help the case and will be much appreciated.

The present engine will be under the disposal of the Government when required.

For your kind recommendation please.

Re: Your SCN/52 of 9th Jan 945

On the 6-3-945, the orange grove of the applicant Odel Tokan at Balan-Sawa Village was inspected by me in respect of his application for the release of 200 empty asphalt drums.

On my inspection I could point out that two small flooding streams were passing through his land, one at the North side and the other at the South. The latter caused the uproot of certain twenty trees and the discovery of others in addition to erosion of soil.

The release of 200 empty drums for channelling in the above mentioned grove and land will be much useful and appreciated please.

Yours faithfully,
T.A. J.A.A.TK

Subject: Controlled Materials - May
Sudj. Abdul Majid

Reference: Attached Enclosures.

On the 12th February I was called by the applicant, to visit his project and to attend the test of water supplied by his new bored well at Dier El Ghosun, and the followings were observed

The water supply was tested in my presence and a good result of 70-75 M³ per hour were obtained.

The applicant land is of a very fertile loam sandy soil, suitable for different vegetables, cereals and trees as it is occupied since several years ago, when it was irrigated from another neighbouring well.

I could understand that several land-owners of neighbouring people are trying to make agreements with the applicant to supply their lands with necessary water.

With regard to the quantities of concrete iron bars and bamboo required for the project it is hereby left for technical checking to the Authorities Concerned.

P. T. O.

The release of the belt required
15 Micro X 15 cms, with the other Controlled
Materials after being checked will be
very useful and much appreciated

For your kind recommendation

Jerusalem

Subject: Controlled in Tulkarm
Re: your CAP/111 of 15-2-45

Kindly note that the applicant land was inspected by me, and nothing was done with the 5 tons of cement referred to the applicant owing to the condition. However, it is understood that the 5 tons of cement will be used for roofing, flooring and plastering of the pump rooms as well as for the construction of the motor foundations which was already done.

2 The following points will clear the great necessity of construction of water reservoir and channels, as shown on the map attached to the applicant document.

Yours faithfully
P.T.O.

-2 A. Undrilled surface of the land - as it is
high at the west and low at the north and
east sides.

B. Present situation of the well and danger
at the mouth of the land.

C. Shortage of water supply to irrigate the
whole land which is about 4000 acres
and which cause the continuous work
of the water. The water is not for
the irrigation of the west part of the area
either by channels or by pipes.

Both aspects of the situation
required for the future. It is to be
indicated on the map in the west.

But the fact as to be indicated by the
water, too, can be seen as it is very
difficult to the city to water the
supplies after trying several times in vain.

For your kind assistance please

Ref: Your CAP/K/237 of 5-2-45

On the 21-2-45 the land of the applicant Raouf Halabi at Wadi el Falak was inspected by me and the followings were observed.

- 1 The land in question is a sandy loam soil, suitable for vegetables, cereals and some fruit trees, as it appears from the present position.
- 2 The scheme is supplied with a well, motor engine and a pump of 6" full of water which irrigates about 250 Dunams to the applicant and his neighbors.
- 3 The land of the applicant is about 340 Dunams, but owing to its unlevelled position, no more than 100 Dunams are irrigated, and the rest of the land

P.T.O.

as under dry farming.

As the land is on general of a sandy soil area and requires to be irrigated periodically to be utilized for vegetable and other production, the release of eight tons of cement for the construction of a new pipe line to recover the area indicated on the attached map will be of good interest and much appreciated.

above quoted letter, I beg to state ^{that} the 168
bags of cement released to the applicant
Selim Hanoun are still kept in his store
and nothing had been done with them
until a sufficient quantity of cement is
released for completion of the scheme.

Recently a joint visit was made
together with the Irrigation Engineer to the
applicant land - where the Engineer founds
certain corrections on the plans and the
methods of irrigation which comply with
the quantity of water supply.

A full detailed report will be submitted
by the Agri Irrigation Engineer on this
subject, as well as joint decision as
to the sufficiency of 30 tons of cement

S.P.T.O.

Including the 168 bags released previously
For your kind approval please

On the 13th instant the land of applicant Hg
Taleb El Mouna and Co of Habbay, situated at
Kfar Yona T.K. S/D., was inspected by me and the
followings were observed:

- 1 The land in question is a very fertile soil
3 soil land and suitable for different vegetables,
it was occupied with some during the past but
as well as prepared for planting in the coming
spring season.
 - 2 There were difficulties in irrigating the
plantations from the old well which supplies the
citrus grove, owing to shortage of water supply, and
the high situation of the land especially for veget-
ables.
 - 3 The land lord bored a new well, and good
quantities of water are expected after test. But the
low situation of the well requires the release of
the iron pipes.
 - 4 The room for motor engine and pump is already
built but still without roofing and flooring.
- Therefore the release of 200 Meter of iron pipes
will be much useful and appreciated.

P.T.O.

With regard to the amount of 3 tons and would
 500 lbs. required for roofing and glazing, I shall
 be very thankful if you kindly consider the
 quantities needed for this purpose.
 For your kind attention please

Re: Attached application

I enclose herewith an application submitted by Mahmoud Abu Hanish & Aalam, in which he applies for the release of 7000 meters of barbed wire to protect his vegetable garden and products.

The garden in question is the best one at present in the village as well as the applicant is a leader of vegetable growers in his locality.

I therefore recommend the release of 6000 meters of the above wire, which are quite sufficient for the land in question.

For your recommendation please

Ref: Attached Enclosures

I enclose herewith the attached application together with other enclosures submitted by Hajj Abdul Razik El Nimr from Jatt Village, Tulke S/D, in which he is applying to be permitted to purchase some controlled materials for agricultural purposes.

The applicant land in which the project will be done was visited by me on the 23-11-44 and the followings were observed:

The applicant land is situated on the west side, 6 kms far from the village and not far from Khulrah Railway Station. It is about 125 Dunams P.T.D.

of light sandy soil, very fertile and
suitable for both vegetable and fruit trees.
The applicant bore a well, and water
was tested, 50 C.M. were obtained per
hour as per attached statement.

It seems that the water (Nagari)
in the applicant's land locality is available
at 2-3 meters depth.

Therefore the return of the following out-
rigger materials will be much appreciated.

- A Motor Engine 17/15 as listed on
COM/54
B Materials required for manufacture
of the pump engine
C Transmission - belt 4 feet long 220
D Cement for foundation for pump 22
E Foundation Channels 1056
F Water Tank 44

Other cement and iron bars, to be
checked by authorities for use.

Re: Attached application

The Commission was informed
by you that you intend to irrigate
your grounds by means of a
gravity system.

The method of irrigation of vegetable
land at present in this land is very
primitive and wastes too much
water for flooding water
in a dry channel.

The release of 450 kg of cement
for the construction of a stone channel
will be much appreciated.

For your recommendation - please

Ref: Attached Application

Abdellatif Bey Salah, grove owner and vegetable grower at Balqunish Village, stated that the pump in his grove is useless for the irrigation of his tree and vegetables and asks for a release of a vertical pump.

On the 30th 10-944, the place was visited by me and the followings were observed.

The grove and areas for which the pump is required, are about 365 Dammams, most of which are under citrus trees.

The land in question is irrigated from a bored well and a motor engine 47 H.P.

Rowstor Howess Mark, and a pump with pistons of 8", which usually can supply 70 C.M. per hour.

P.T.O.

the pump in question is wrongly fixed
on the well and continuous movement
was remarked on the fixing bridges
and fixed parts which cause the breakage
of the left piston from time to time.

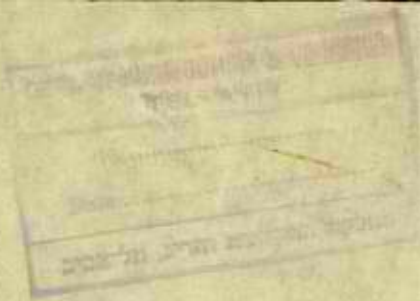

Moreover no water was supplied by the
pump during 15 minutes work.

On discussing this matter with an
expert in addition to the grove owner,
I was informed that the repairs of the
present pump requires 500-600 pounds
and a lot of time.

As this question as a technical one
and requires an expert to give his opinion
I hereby submit the application with the
COM 54 Form to be referred to the
Concerned Service to give its necessary
recommendation in this respect.

Controller of Agricultural Production -
Jerusalem

Subject: Controlled Materials

Ref: your CAP/11/196 of 21-9-64

On the 27-9-64, the applicants' groves and land were visited and the followings were observed

The groves and land in question are situated on a fertile sandy loamy land at Shebet Kupat Sufa, which are suitable for vegetable of different sorts as it appears from the present cultivation.

R Applicants' land is supplied with a motor engine of 26 H.P. Dents and a vertical pump of 6 meters which supply 80 CM per hour and which can irrigate 2000 square meters only.

P.T.O

As the Engineer statement shows -
 on the attached plan, is over the
 reasonable standard for vegetable
 cultivation, the quantity of cement
 required for this project can be
 reduced to a reasonable amount
 on condition that the whole project
 may be supplied with sufficient
 irrigation.

Therefore the release of the under-
 stated quantities of cement will be
 much appreciated.

J. A. P. T. K.

Controller of Agricultural Production
Jerusalem

Subject: Controlled Materials
Ref: Joun O.A.P./1111 of 14-9-44.

On the 26th 9-44, the applicant project was inspected by me at Bagan village, and the following observations were noted.

1 The applicant land is a good fertile light sandy soil, suitable for different vegetables as it occurs from the present autumn cultivation.

2 The land is supplied with a motor engine of 22 H.P. and a vertical pump of 5."

On testing the capacity of the pump and the quantity of water supply at the date of inspection, the yield was about 30 C.M. per hour. Later on the quantity was increased to 45 L.M. and it is hoped to be more increased later and later, as it seems that the pump is still thorough sand with the water.

However the above quantity of water in its present condition can irrigate 120 Dunams only. An additional amount of 60 to 70 Dunams will be irrigated if the required quantity of cement for the construction of the reservoir tank is released after being considered and approved by you for this essential cause.

3 The motor engine and the pump are still in the open field which will cause some
B.T.O.

VR

damages to the engines. Specially as are in
October the starting of Rainfall season. Therefore
the release of the stated quantity of cement for
building rooms for the engines will be much
appreciated.

- H Flat rubber belt of 19 Meters long, 14 CM. width
is required and hereby recommended.
- S With regard to the iron bars and timber
calculus for roofing and for doors and windows
are hereby left to your consideration.

Therefore the release of the under stated
controlled materials will be much appreciated.

A	Cement required for channels for 2335 feet instead of 4807 Meters indicated in the engineer statement	2335	Kgs.	21825
B	Cement for Construction of Reservoir			8570
C	Motor Pump Room			6537
D	Roofing			3145
E	Plastering			1623
F	Flouring			605

Total Kgs. 42304

G Flat rubber belt 19 Meters of 14 CM
